ADMIN PANEL
https://test.baliyecouture.com/admin

Version: 30 October 2026

Contents

1. Getting started: signing in, the menu, your team
2. AI Studio: turning real embroidery into reusable pieces
3. Getting the best AI results
4. Design Builder: setting up Create Your Own Design
5. Other sections: content, measurements, newsletter, credits, team
6. Quick reference: where to find things

	Address	What it is
Website	https://test.baliyecouture.com/	The shop your customers see: pre-made designs, Create Your Own Design, cart and checkout.
Admin panel	https://test.baliyecouture.com/admin	Where you and your team manage everything in this guide. Sign in with your email and password.

How to read this guide

Words in **bold** are buttons, tabs or fields exactly as they appear on screen. A path like **AI Studio › Saved embroidery** means: open AI Studio from the menu, then go to the Saved embroidery section.

1. Getting started

Signing in

1. Open the admin panel: https://test.baliyecouture.com/admin. Bookmark it for next time.
2. Type your **Email** and **Password**. Click the eye icon in the password box to show or hide what you typed.
3. Click **Sign in**. You land on the Design Builder.

You stay signed in on that browser. Use **Sign out** at the bottom of the menu when you are on a shared computer.

To see your changes as customers do, open the website in another tab: https://test.baliyecouture.com/. The **View website** link at the bottom of the admin menu opens it too.

The menu

The menu is on the left on a computer. On a phone, tap the menu icon at the top left; it slides in from the side.

Menu item	What it is for
Design Builder	Garments, steps and options for Create Your Own Design, their prices and pictures.
AI Studio	Turn embroidery from real garment photos into pieces the AI can place on any garment.
Measurement fields	The measurements customers fill in.
Home page, **Pre-made Designs page**, **Footer**, **Terms & Conditions**	Words and pictures on those website pages.
Newsletter	People who signed up for the newsletter.
Design credits	Credits customers use for AI designs, and your remaining AI balance.
Team (owners only)	Add or remove people who can sign in to this panel.

Owners and team members

- **Owners** are the main Baliye accounts. They see everything, including **Team**.
- **Team members** are added by an owner. They see and can change everything except the Team page.
- How to add someone is in section 5, *Team*.

2. AI Studio

AI Studio takes a photo of a real embroidered garment and lifts the embroidery off it. It cuts the result into separate **pieces** (neckline border, shoulder motif, cuff border, hem border and so on) and remembers where each piece belongs. Those pieces can then be stitched onto any plain garment, in any colour, and offered to customers in Create Your Own Design.

Each embroidery you make is saved under a name, for example *Gota Rose*, and appears under **Saved embroidery** at the top of the page.

The three steps at a glance

Step	What you do	Cost
1. Add the embroidery	Name it, tick its necklines, write details, add photos, press **Extract embroidery**.	One AI image
2. Check the pieces	Correct each piece's name, position and side. Approve the good ones.	Free
3. Try it on	Upload a plain garment photo, preview where pieces land, then generate.	Preview free, one AI image per variation

Step 1: Add the embroidery

Name, necklines and details

1. **Name of this embroidery**: a short name customers will understand, for example *Zari Work* or *Mirror Work Anarkali*. This is required before anything is saved; if it is missing the box turns red.
2. **Made for which necklines?** Tick each neckline this embroidery is designed for (V-Neck, Round Neck, High Neck…). In Create Your Own Design, customers only see it after picking one of these necklines. Tick none if it suits every neckline.
3. **Details for the AI**: write what someone who knows the work would say. Technique, colours, widths, and where each part sits. For example: *Hand gota patti in light gold with small pearls. Neckline border about 3 cm wide. Paisley butis only on the sleeves. Hem border sits just above the kurta hem.* These words are used every time the AI extracts, names or stitches this embroidery.

Why the details matter

The AI does not know embroidery the way you do. One or two sentences about the real technique and colours are the single biggest help to accuracy. Silver work, pastel threads and thin borders especially benefit from being described.

Where the embroidery comes from

Choose one of two options:

- **From garment photos**: the AI lifts the embroidery off your photos. Uses one AI image.
- **I have a clean embroidery image**: you already have the embroidery on a plain white background (for example from a designer). Free.

Adding photos

There are six photo boxes. Each one shows a small drawing of the part of the garment it should cover.

Photo box	What to show
Front, full garment (recommended)	Neck to hem, straight on. The most important photo.
Neckline close-up (recommended)	Neck, yoke and upper chest, sharp and close.
Left sleeve	Shoulder to cuff on the left of the photo.
Right sleeve	Only if it differs from the left one.
Hem / daaman close-up (recommended)	The bottom border, laid flat if you can.
Back	Only if the back has embroidery.

More close-ups. After the six boxes there is an **Add close-up** tile with a + sign. Use it for any detail the six boxes miss: a cuff from closer, a motif, a second border. You can add up to six more. Under each one, write what it shows, for example *left cuff, gota border, light gold*. The AI reads that line together with the photo.

To replace or remove a photo, hover over it (on a phone the buttons are always shown) and use the arrows or the cross.

Extract

1. Press **Extract embroidery**. It usually takes under two minutes. You can leave the page open and wait.
2. When it finishes, the embroidery appears on a white sheet. AI Studio then cuts it into pieces, names them and saves them automatically under your name. You move straight to step 2.
3. If the automatic saving did not start, press **Find & name the pieces**. No new AI image is used.

Page reloaded before it finished?

Finished extractions that were never saved appear under **Extractions not saved yet** (for 7 days). Type a name in step 1, then press **Open & save** on the one you want. Nothing is charged again.

Step 2: Check the pieces

Every piece has a picture and these fields. The small garment drawing on the left lights up where the piece you point at will go.

Field	What it means
Piece name	A clear name, for example *Zari Paisley Shoulder Motif*.
Position	Where it belongs: neckline, yoke, placket, shoulder, chest, sleeve, sleeve cuff, waist, buti (small repeated motif), hem border, lower border or back.
Side (as in the photo)	**Pair** = on both sides, mirrored (most shoulders and cuffs). **Left** or **Right** = one side only. **Center** = on the centre line.
Work type	The technique: Zari, Resham, Mirror, Sequin, Gota Patti, Zardozi, Beads, Cutdana, Aari…
Description	One sentence on what it looks like and where it sits. The AI uses this when stitching it.

1. Go through each piece. Correct the position and side first: **that decides where it lands on every garment**.
2. Correct the name, work type and description in your own words. Changes save when you click out of the box.
3. Delete anything that is not embroidery (fabric, shadows, noise) with the bin icon on that piece.
4. Approve each good piece, or press **Approve all** when every piece is right. Only approved pieces are ever used.
5. If a piece is missing, use **Add a missing piece** and upload a clean picture of just that piece on white. The AI names it and finds its position.

The AI learns from your corrections

Every time you correct a name, position, side, work type or description on a piece the AI named, AI Studio remembers what the AI said and what you changed it to. The next time it names pieces, it is shown your latest corrections as examples and follows your way of naming things. The more carefully the first few embroideries are corrected, the better the next ones come out.

At the top of step 2 you can see the embroidery's **Necklines** and **Details for the AI**, with an **Edit details** button.

Step 3: Try it on a plain garment

This is a test for you only. Customers do not see it.

1. Upload a **Plain garment (no embroidery)** photo: front view, whole garment in frame. Its colour, cut and pose are kept exactly.
2. Keep **Copy the layout from the source photo** ticked. AI Studio reads where each piece sits on the finished design and puts it in the same place on the plain garment. It uses the front photo from step 1, or you can add a **Source design photo** of the embroidered garment.
3. If the garment is too close in colour to its background, AI Studio asks you to tap six points once (neckline, both shoulders, both cuffs, hem). They are reused for every try-on on that garment.
4. Press **Preview placement**. This is free and shows exactly where every piece will land.
5. Choose how many **Variations** you want (1 to 4; each is one AI image) and press **Generate try-on**.
6. Results are saved. Use **Download** to keep a copy.

Plain garment photos

For the closest match, the plain garment should look like the embroidered photo: same mannequin, same grey background, front view, arms slightly away from the body, the whole outfit in frame, and no embroidery or contrast trim at all.

You can make plain versions of the Patiala Suit, Kurti, Anarkali Suit and Sharara Set in an AI image tool. Example prompt: *Full-length front view of a plain light blue Patiala suit on a white headless mannequin with white hands, arms down. No embroidery, no print, no border, no lace. Plain light grey studio background, soft even lighting. Photorealistic, whole outfit in frame, portrait 3:4.*

Best of all: attach the embroidered photo and ask the tool to *remove all embroidery and keep everything else the same*.

Showing embroidery to customers

Section **Show in the designer** decides which saved embroidery customers can pick in the **Embroidery** step of Create Your Own Design.

Each saved embroidery has a dropdown:

Choice	What happens
Not shown	Customers do not see it.
Show as "(its name)" (name it was saved with)	A new Embroidery option is created with that name and linked to it.
Other name…	A box opens. Type the name customers should see and press **Show**.
Show as "(an existing option)"	Uses an Embroidery option that already exists in the Design Builder. Options already used by another embroidery are greyed out.

- An embroidery can only be shown once at least one of its pieces is approved.
- **Once any embroidery is shown**, the Embroidery step lists only the shown embroidery (plus *No Embroidery*), each with its picture from AI Studio. The older Embroidery options come back if you set every embroidery to Not shown.
- Customers see each embroidery only after choosing one of its necklines (see step 1).
- When a customer picks it, the AI preview stitches that exact embroidery onto their design.

Editing and deleting saved embroidery

- Under **Saved embroidery**, hover over a card. A **pencil** (edit) and a **bin** (delete) appear. On a phone they are always shown.
- The pencil opens **Edit embroidery**: change the name, the necklines and the details for the AI, then press **Save**. New necklines take effect in Create Your Own Design straight away.
- Delete removes the embroidery and all its pieces. If it was shown in the designer it is taken off there too. This cannot be undone.
- Click a card to open it and continue checking its pieces. The **New embroidery** tile starts a fresh one.

What the AI costs

Action	Cost
Extract embroidery	One AI image
Find & name pieces, Add a missing piece	A tiny amount (text only)
Preview placement	Free
Generate try-on	One AI image per variation
Customer AI previews in Create Your Own Design	One AI image each (repeat choices are reused, not charged again)

Your remaining AI balance is shown under **Design credits › Your AI credit (OpenAI)** (see section 5).

3. Getting the best AI results

These habits give the AI the best chance of a close match. Each one helps on its own; together they make the biggest difference.

Photos

- Plain background, daylight or soft light. No flash glare on zari.
- Garment flat or on a mannequin, straight on, nothing cropped.
- Close-ups sharp enough to see individual stitches.
- All photos of the same garment. One garment per photo.
- Use **Add close-up** for every detail that matters, and always write what each close-up shows.

Words

- Always fill in **Details for the AI**: technique, true colours (say *silver* or *pastel pink* if it is not gold), border widths, where butis sit.
- In step 2, give every piece a correct position and side, a clear name and a one-line description.
- Correct the AI rather than deleting and redoing: corrections teach it for next time.

Plain garments for try-on

- Same mannequin, background and framing as the embroidered photo.
- Truly plain: no print, border, lace or contrast piping.
- A mid-tone colour (pastel blue, rose, sage). Pure white or black hides the embroidery edges.
- Portrait shape (3:4), whole outfit in frame, both cuffs and the bottom hem visible.

Checking a result

- Always press **Preview placement** first. If a piece is in the wrong place, fix its position or side in step 2 before generating.
- If one piece keeps coming out wrong, improve its description or replace it using **Add a missing piece**.
- If the whole extraction is poor, start a **New embroidery** with clearer, closer photos.

Common questions

Question	Answer
Is my embroidery saved?	Yes. Once the pieces are found it appears under Saved embroidery. The green badge on images means they are saved in Shopify Files.
A piece is missing.	Open the embroidery and use **Add a missing piece** with a clean image of that piece on white.
A piece is wrong or empty.	Change its position or side, or delete it with the bin icon.
The plain garment photo: is it saved?	No, it is only used for that try-on. The try-on results are saved and can be downloaded.
A customer can’t see an	Check it is shown under Show in the designer, has approved pieces, and that the

Question	Answer
embroidery.	customer picked one of its necklines.

4. Design Builder

The Design Builder controls **Create Your Own Design** on the website: which garments customers can design, the steps they go through (Fabric, Neck, Sleeve, Embroidery, Length…), the options in each step, prices and pictures. It has four tabs.

Saved to Shopify too

Names, prices, descriptions and visibility are saved to Shopify as well as the website. You will see *Saved. Name, price, description and visibility were also updated in Shopify.* after saving.

Tab 1: Garments

Each card is a garment customers can design, for example Patiala Suit, Kurti, Anarkali Suit or Sharara Set. Click one to edit it.

Details

- **Garment name**, **Description** and **Collection** (Indian, Western or Indo-western).
- **Starting price**: the base price. Options add to this.
- **Display order**: lower numbers show first.
- **Visible on the website**: hidden garments stay saved but customers can't pick them.

Pictures

- **Card**: the picture on the garment card.
- **Builder preview**: the photo shown while the customer designs. The AI preview edits this photo.
- Click a picture tile to upload, or drag a picture onto it.

Steps in the builder

The steps a customer goes through for this garment, in order.

- **Move up** / **Move down** to reorder, **Remove step** to take one away.
- **Options offered**: tick which options this garment offers. Nothing ticked means every active option of the step is offered, including ones added later.
- **Pre-selected option**: the choice already selected when the customer arrives.
- **Only show this step when**: for example show Cuff only when Sleeve is Full Sleeve.

Keep Neck before Embroidery

Embroidery is filtered by neckline. Make sure the Neck step comes before the Embroidery step for every garment, so customers pick the neckline first.

Measurements asked for

Tick which measurement fields this garment needs. The fields themselves are set up under **Measurement fields** (section 5).

Tab 2: Steps & options

On the left is every step (Neck Type, Embroidery, Sleeve Type, Lower, Dupatta, Length, Size…) with its number of options. Click a step to edit it. **New step** adds one; then add it to a garment under Garments › Steps in the builder.

- **Title shown to customers** and **Help text** for the step, then **Save step**.
- Each option shows its picture, price and buttons. Click the picture to upload or replace it.
- Options linked to AI Studio embroidery show the AI Studio picture and an **AI Studio** badge instead of an upload box.
- **Delete** removes an option from every garment (you are asked to confirm). Saved designs keep their copy.
- **Edit** opens: Name, Adds to price, Description, Display order, **Visible to customers**, and **Only offer with**.
- **Only offer with**: tick options from other steps this one goes with. Nothing ticked means it goes with everything. Example: an embroidery that only suits some necklines.
- **Add an option** at the bottom of the list: name, price (and colour for colour steps), then **Add**.

Tab 3: Missing pictures

Lists every garment and option that still has no picture, grouped by part, with jump buttons at the top.

- Click any tile to upload its picture, or drag a picture onto it.
- Or drop many pictures at once on the drop zone: each file goes to the picture its name matches, for example *neck-round-neck.jpg* or *Round Neck.jpg*. Files that don’t match get a list to choose from.

Tab 4: Bulk import

Add or update many garments and options at once from one Excel sheet.

1. Download the sheet: **Blank template** to start fresh, or **Current catalogue** to correct what is on the site now. The sheet has a *How to fill* tab and help notes on every column.
2. Fill it in and upload it. You first see a preview of every row: new, update, no change or error.
3. Press **Import**. It is only enabled when no row has an error.

- Nothing is ever deleted by an import. Uploading the same sheet twice changes nothing the second time.
- Pictures are not in the sheet. Add them afterwards under **Missing pictures**.

5. Other sections

Website content: Home page, Pre-made Designs page, Footer, Terms & Conditions

These four menu items edit the words, pictures and links on the website (https://test.baliyecouture.com/). They all work the same way:

1. Open the page from the menu. It is split into sections, each in its own box.
2. Change the words, pictures or links you need. **Unsaved changes** appears at the top.
3. Press **Save**. **Discard** throws away changes you have not saved yet.
4. Open the website in another tab to check. Changes reach open browsers within a few seconds, but never while a customer is typing, checking out or designing.

- **Pictures:** click a picture tile or drag a picture onto it. Picture lists can be added to, removed and reordered.
- **Write with AI** sits on text fields: write, improve, shorter, longer, fix spelling, or your own instruction. It only suggests: click **Use this**, then **Save**.
- **Reset to original** on a section puts back its original words and pictures. Nothing changes on the website until you press Save.
- Product names, prices and photos come from Shopify automatically, and fabric prices from the Design Builder, so they never go out of date. You only edit the words around them.

Home page sections, top to bottom

Every section except the top banner has a **Show** switch: turn it off to hide that section from the home page without losing its content.

Section	What you can change
Top banner	The main photo, heading, text and buttons. The product card on the photo shows the product whose Shopify handle you enter; it hides itself if that product is removed.
Four promises under the banner	Four short promises with their icons and text.
Shop by silhouette	One card per garment type (Shopify product type). Its "From" price is worked out automatically. You can set your own picture for each.
Statement	A short brand statement.
Designed online (laptop picture)	Words, the *Try the designer* button, and the picture shown on the laptop screen (a 16:10 screenshot of the designer).
Ready to order (product tabs)	The tabs of products. Each tab is a Shopify tag, for example *bestseller* or *editors-pick*. Tag products in Shopify to add them to a tab.
Collections	Collection cards with pictures and links.
Fabric library	Heading and text. The fabrics and prices come from the Design Builder's Fabric step.
Behind the scenes	Pictures and words about how the clothes are made.
Customer photos and reviews	Off until real reviews exist. Turn it on once you have them.
Note from the founders	The founders' message and photo.
Newsletter sign-up	The heading and text of the sign-up form. Sign-ups appear under **Newsletter** in

Section	What you can change
	the menu.

Pre-made Designs page

The banner, words and pictures at the top of the pre-made designs listing, the silhouette tiles, and the **Design-your-own block** that invites customers to Create Your Own Design. The products themselves come from Shopify.

Footer

- The logo line, the link columns (for example Shop, Company and Contact) and the bottom bar.
- **Social media links**: paste the brand's Instagram, Facebook and other page addresses. The right icon is picked from the address; empty ones are hidden.
- **Copyright line** and **Credit line** at the very bottom.

Terms & Conditions

A word-processor style editor: headings, bold, lists and links, with undo. No code needed. Use **Write with AI** to tidy wording, but always read legal text yourself before saving.

Measurement fields

The fields customers fill in when they save their measurements: Name, Unit, Help text, Default value and Order. A **How to measure** video can be added. Tick which fields each garment needs in the Design Builder.

Newsletter

- Everyone who signed up on the website. Search by email.
- **Export CSV** downloads a CSV for Shopify Email or Mailchimp. Nothing is emailed from the website itself.
- Remove someone with the bin icon.

Design credits

- **Show design credits on the website**: on means customers see their credits and each new AI design uses one; off means AI designs are free. Balances are kept either way.
- **Find a customer** to add the credits they paid for. Corrections take a negative amount.
- **Your AI credit (OpenAI)**: open OpenAI billing, copy the dollar amount at the top of that page, and paste it here. The panel then shows roughly how many AI designs it can still make.

Team (owners only)

1. Open **Team** from the menu.
2. Under **Add a team member**, type their **Name**, **Email** and a **Password** (at least 8 characters), then press **Add member**.
3. Share the email and password with them privately. They sign in at the normal admin login.

- **Can sign in** switch: turn someone off without deleting them.
- **New password**: set a new password for them. They are signed out and must use the new one.
- **Remove**: deletes their login after you confirm.

- Switching off, removing or changing a password signs the person out on every device within seconds.

6. Quick reference

I want to…	Go to
Create a new AI embroidery	AI Studio › New embroidery
Add more detail photos	AI Studio › step 1 › Add close-up
Say which necklines an embroidery suits	AI Studio › step 1, or the pencil on its Saved embroidery card
Correct a piece’s position or name	AI Studio › open the embroidery › step 2
Test embroidery on a plain garment	AI Studio › step 3 › Preview placement, then Generate try-on
Let customers pick an embroidery	AI Studio › Show in the designer
Edit or delete a saved embroidery	AI Studio › Saved embroidery › hover the card
Change a garment’s price or photo	Design Builder › Garments
Change the order of steps for a garment	Design Builder › Garments › Steps in the builder
Add, price or delete an option	Design Builder › Steps & options
Upload missing pictures	Design Builder › Missing pictures
Update many options at once	Design Builder › Bulk import
Change home page words or pictures	Home page
Export newsletter emails	Newsletter › Export CSV
Give a customer credits	Design credits › Find a customer
Check the AI balance	Design credits › Your AI credit (OpenAI)
Add a colleague	Team › Add a team member
